

1. A ground rod having a first end, a shaft portion and a second end said first end having a pointed auger portion;
the second portion having a tip portion adapted to mate with an electric rotating powered driver.

2. The ground rod claimed in claim 1 wherein said second end is faceted.
3. The ground rod claimed in claim 1 wherein said second end has a square recess adapted to receive a standard socket drive.
4. The ground rod claimed in claim 1 having a second end also adapted to attach to a handle to permit manual insertion and removal of said ground rod.
5. The ground rod claimed in claim 1 driven partially into the ground and attached to an electrical system of a building.
6. The ground rod claimed in claim 1 attached to an electric threader.

7. A temporary ground rod comprising a first end and a second end connected together by a shaft:
 - said first end comprising an auger fixed to said shaft;
 - the second end comprising a head portion adapted to connect to and be driven by a wrench; and
 - a handle removably attachable to said head portion.

- 10 -

8. The ground rod claimed in claim 7 wherein said second end is faceted.
9. The ground rod claimed in claim 7 wherein said second end has a rectangular recess adapted to receive a standard drive.
